

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A receptacle assembly, comprising:
a body used for connecting a computer to a local area network;
~~a data transfer portion attached to the body~~ receptacle, a switch and an
illumination device integrated into the body; and
a wireless communication portion attached to body, the wireless
communication portion including an antenna connector attached to the body.
2. (Original) The receptacle assembly of claim 1 wherein the wireless
communication portion includes a substantially integral antenna.
3. (Currently Amended) The receptacle assembly of claim 1 wherein the wireless
communication portion includes a controlled impedance interface ~~connected to~~
~~the connector.~~
4. (Original) The receptacle assembly of claim 3 wherein the controlled impedance
interface is a coaxial-type cable.
5. (Currently Amended) The receptacle assembly of claim 1 wherein the ~~data~~
~~transfer portion~~ receptacle includes an RJ45-type receptacle ~~including~~ having a
plurality of contacts.
6. (Currently Amended) The receptacle assembly of claim 1 ~~further comprising:~~
wherein the switch is a manually operable switch ~~attached to the body.~~

7. (Original) The receptacle assembly of claim 6 wherein the switch is manually movable between a first position and a second position.
8. (Cancelled).
9. (Original) The receptacle assembly of claim 1 further comprising:
a plurality of illumination devices attached to the body.
10. (Original) The receptacle assembly of claim 9 wherein each one of the illumination devices includes a light emitting diode.
11. (Original) The receptacle assembly of claim 9 wherein each one of the illumination devices includes a light conducting member having a cavity therein for receiving a powered illumination device.
12. (Cancelled).
13. (Currently Amended) A communication apparatus, comprising:
a wireless communication device;
a ~~network interface device~~ connector coupled to the wireless communications device;
a receptacle assembly body coupled to the connector;
~~a data transfer portion attached to the receptacle assembly body, the data transfer portion being electrically connected to the network interface device~~
receptacle, a switch and an illumination device integrated into the body; and
a wireless communication portion attached to receptacle assembly body, the wireless communication portion being electrically connected to the wireless communication device.

14. (Original) The apparatus of claim 13 wherein the wireless communication device includes a radio and wherein the wireless communication portion includes an antenna attached to the radio.
15. (Cancelled).
16. (Currently Amended) The apparatus of claim 13 ~~further comprising: wherein the~~
switch is a manually operable switch attached to the body, the switch being
~~electrically connected to the wireless communication device.~~
17. (Original) The apparatus of claim 16 wherein the switch is movable between a first position and a second position, the wireless communication device being made inoperable when the switch is moved from the first position toward the second position.
18. (Original) The apparatus of claim 13 further comprising:
a plurality of illumination devices attached to the body.
19. (Original) The apparatus of claim 18 wherein each one of the illumination devices includes a light emitting diode electrically connected to the wireless communication device.
20. (Original) The apparatus of claim 18 wherein each one of the illumination devices includes a light conducting member including a cavity therein for receiving a powered illumination device.

21. (Original) The apparatus of claim 20 wherein each one of the powered illumination devices includes a light emitting diode electrically connected to the wireless communication device.
22. (Original) The apparatus of claim 13 wherein the wireless communication portion includes a connector electrically connected to the wireless communication device.
23. (Previously Amended) The apparatus of claim 13 further comprising:
a controlled impedance interface connected between the wireless communication device and the wireless communication portion.
24. (Currently Amended) A computer system, comprising:
an enclosure;
a microprocessor mounted in the enclosure;
~~a system memory coupled to provide storage to facilitate execution of computer programs by the microprocessor;~~
~~an input coupled to provide input to the microprocessor;~~
~~a video controller coupled to the processor;~~
a mass storage coupled to the microprocessor;
a wireless communication device electrically connected to the microprocessor;
~~a network interface device electrically connected to the microprocessor~~
connector coupled to the wireless communication device;
a receptacle assembly body coupled to the connector and integrating a receptacle, a switch and an illumination device;
a data transfer portion attached to the receptacle assembly body, the data transfer portion being electrically connected to the network interface device; and

PATENT

a wireless communication portion attached to receptacle assembly body,
the wireless communication portion being electrically connected to the wireless
communication device.
